2. Function

Feedback Circuit S21

If a feedback loop is necessary, e.g for the monitoring of contactors, it has to be wired via terminal S21. See details in chapter 15 "Wiring / Applications - Feedback Circuit SD1K.

Safe relay contact 13-14

By applying the control line at A1/A2, the safe relay contact will close immediately.
Turning of the power supply leads to an open relay contact.

Auxiliary output C1

The auxiliary output C1 switches inverted to the safe relay contacts.

Hint:

The auxiliary contact can be used for the failure monitoring of the SD1K. A non switching of the relay contacts with present control line will be detected.

Behaviour in case of a fault

It is ensured that one single fault does not lead to loss of the safety function and that every fault is detected latest when the system is switched off and switched on again through cyclic self-monitoring.

3. Application example

Application example

SD1K as contact reinforcement and test pulse filtering for safe PLC output up to PL e/ SILCL 3

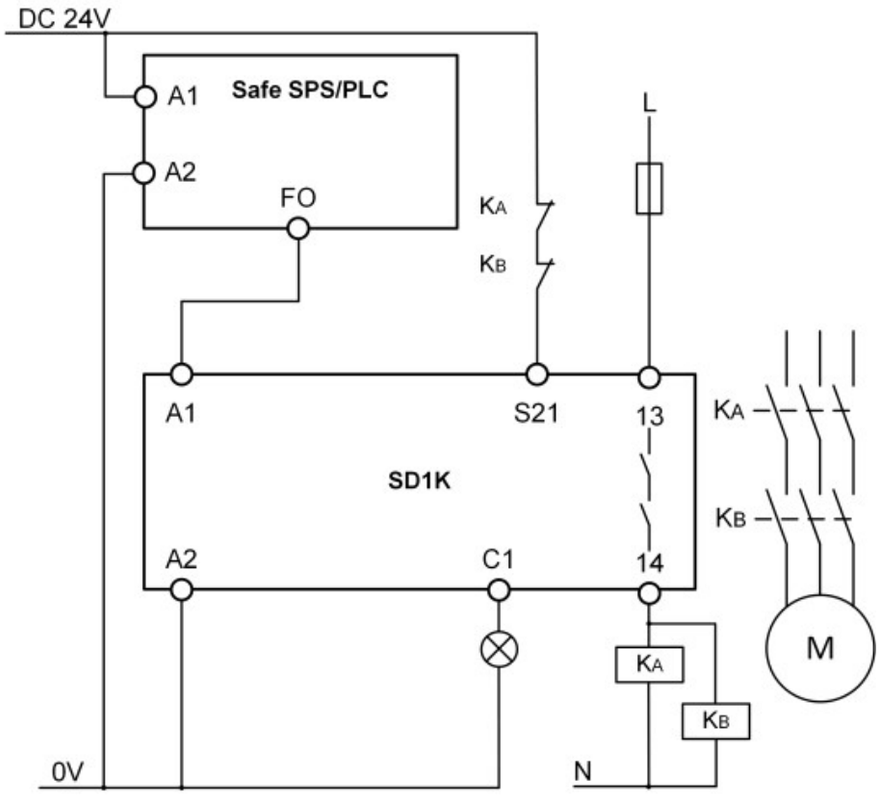

Fig. 2 Contact reinforcement and test pulse filtering for safe PLC outputs

Prerequisite: Safe PLC output meets the required safety level and short circuit between PLC output and SD1K can be excluded (e.g. wiring inside an electrical installation space - see EN ISO 13849-2:2013:02, Tab D4 / D5).
