profile cable wire-Stripper (BW1921)

Article no. BW1920: profile cable-Stripper

Article no. BW1921: profile cable wire-Stripper

The **profile cable-Stripper** is the latest development for removing rubber made outer sheathing of ASi cable.

The blades have got the same shape as the ASi cable and allow an accurate stripping without any problems. For removing the insulation put in the cable, close and press the tool. The special blades do not cause any damage to the inner conductors. Those can be stripped with the additional blades at the side of the tool.

The **profile cable wire-Stripper** is the latest development for removing the outer sheath of ASi cable, which is made of TPE or PUR.

The tool strips ASi cables without any problems, because the blades follow the special shape of the cable.

The pliers' body is made out of fibreglass-reinforced polyamide in an ergonomic and automatic design. Adjustment onto the cable is not necessary since the special hardened blades adjust themselves.
